LT AUDITOR+ 2013
NSS FILE SYSTEMS FOR SUSE LINUX

BLUE LANCE

Real Time Auditing for NSS File Systems for SUSE Linux

THE CHALLENGE

Whether on Netware or Linux, ensuring the privacy, integrity and availability of sensitive and confidential files is the key to meeting compliance and security initiatives. Managing NSS File Systems in a dynamic organization can be a complicated task. Due to their architectural design and commonly used security policies, there are some basic security risks that most NSS File System implementations share.

THE SOLUTION

Blue Lance's LT Auditor+ 2013 NSS File Systems for SUSE Linux is designed to provide detailed auditing and monitoring system activity delivering Clear, Concise, Actionable intelligence. LT Auditor+ 2013 NSS File Systems for SUSE Linux interacts seamlessly and unobtrusively with the operating system to capture all essential activity and changes for NSS File Systems.

FEATURES

24x7 Monitoring with real-time alerts

Management Summary reports with drill-down capability

Over 100 security and compliance report templates

Translation and correlation of raw event log data into plain English reports and alerts

Multiple report formats including Excel, Word, HTML and PDF

Automatic report scheduling and delivery

Audit files, folders, user authentications and USB storage devices

Automatic archiving of Windows native event logs

Enterprise-wide data consolidation

Comprehensive Auditing with Granular filtering

Audit the Auditor

Robust, fault tolerant and load balanced architecture

Multi-Manager-Agent architecture

Automatic audit policy deployment

Built-in agent status and health monitoring

Transform your cryptic & chaotic logs to clear, actionable reports

THINK Ahead.
