NSS FILE SYSTEMS FOR SUSE LINUX BLUE LANCE

Real Time Auditing for NSS File Systems for SUSE Linux

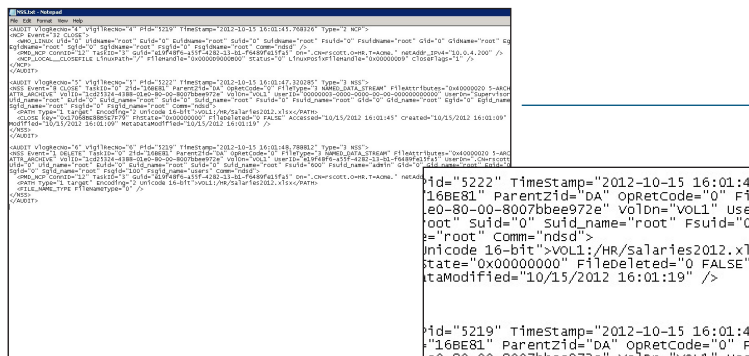

THE CHALLENGE

Whether on Network or Linux, ensuring the privacy, integrity and availability of sensitive and confidential files is the key to meeting compliance and security initiatives. Managing NSS File Systems in a dynamic organization can be a complicated task. Due to their architectural design and commonly used security policies, there are some basic security risks that most NSS File System implementations share.

THE SOLUTION

Blue Lance's LT Auditor+ NSS File Systems for SUSE Linux is designed to provide detailed auditing and monitoring system activity delivering Clear, Concise, Actionable intelligence. LT Auditor+ NSS File Systems for SUSE Linux interacts seamlessly and unobtrusively with the operating system to capture all essential activity and changes for NSS File Systems.

Transform your cryptic & chaotic logs to clear, actionable reports
