SHAREPOINT

Real Time Auditing for SharePoint

BLUE LANCE
FORWARD THINKING

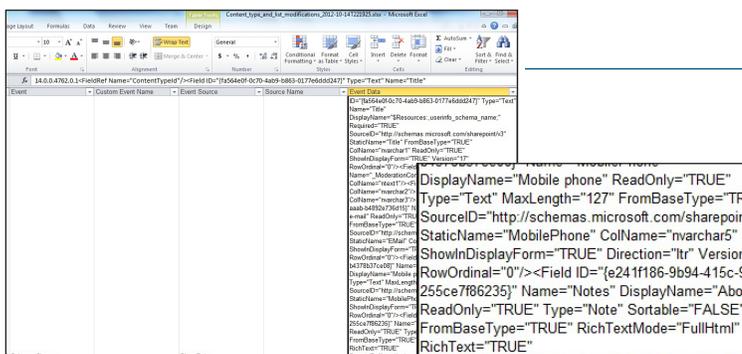

THE CHALLENGE

SharePoint contains important and sensitive information and as it grows, it becomes critical to monitor and audit SharePoint activity for compliance and security requirements. Unfortunately, the native SharePoint audit log is incomplete, not easily readable, translatable or actionable when it comes to satisfying auditor requests. Many organizational policy violations go undetected because most security actions are not audited. This can result in lost productivity and system downtime and because native tools can't prevent or even track site deletions, you could lose log data.

THE SOLUTION

Blue Lance's LT Auditor+ tracks, audits, reports and alerts on all essential activity for SharePoint showing who made what change, when and from where all in real time. LT Auditor+ for SharePoint File Systems is designed to provide detailed auditing and monitoring of SharePoint — delivering Clear, Concise, Actionable intelligence required to audit user and administrative activity in accordance with organizational policies to demonstrate compliance with regulations and guidelines such as Sarbanes-Oxley (SOX); HIPAA, PCI and many more.

Transform your cryptic & chaotic logs to clear, actionable reports

BENEFITS

LT Auditor+ for SharePoint is configurable to fit seamlessly into any organization, large or small. LT Auditor+ allows your organization to immediately reap the benefits of continuous security and compliance monitoring by enabling your organization to improve incident response time, provide comprehensive audit reports, meet compliance control transformation requirements, ensure privacy, confidentiality and integrity, all while saving time and money.

Reporting with LT Auditor+ for SharePoint has never been faster and easier. Through centralized reporting, users can consolidate data or create forensic analysis reports organization-wide. LT Auditor+ for SharePoint offers over 100 standard reports that target both security and compliance, all while adding drill-down capability to individual events. Additionally, new reports may be created and customized to display only required details and scheduled for automated delivery.
